FOR IMMEDIATE RELEASE

MASTER COBALT® 5.5 TPI WOOD CUTTING RECIPROCATING SAW BLADES FROM THE M.K. MORSE COMPANY

CANTON, Ohio – The M. K. Morse Company offers a unique new line of Master Cobalt® reciprocating saw blades for cutting wood and nail embedded wood. Utilizing an innovative tooth geometry and set pattern, this new blade dramatically increases productivity while decreasing the cost per cut.

The larger tooth and increased weld contact area on the Morse 5.5 TPI reciprocating saw blade result in a more durable blade than traditional 6 TPI reciprocating blades. The technologically advanced tooth design allows for increased shock and wear resistance in addition to more aggressive cutting with more teeth engaged. The Morse Master Cobalt 5.5 TPI blade averages over 500 nail cuts before showing any initial tooth strippage. More cuts per blade means less time changing blades and more time getting the job done. The 5.5 pitch, .050 thick, Master Cobalt blades are available in 6”, 9” and 12” lengths.

About The M. K. Morse Company

For over forty years M. K. Morse has been providing professional quality products and dependable service. M. K. Morse offers a wide range of hand tool and power tool accessories, including hole saws, reciprocating saw blades, jig saw blades, portable band saw blades and hack saw blades, as well as industrial quality band saw blades and metal cutting circular saws and blades.
